FET Controller

HEAT PUMP ACCESSORIES

Comfortable operation of your heat pump

The FET controller extends the functions of the WPM standard module. All of these components can be conveniently connected to one another via the system bus. The WPM heat pump manager is the central control unit of the system. It can regulate numerous functions, such as a cascade of two heat pumps or control one direct heating circuit and two heating circuits with mixer. If extended to include the WPE module, a further four heat pumps and heating circuits with mixer can also be controlled. These heating circuits (five in total) can each be controlled by the FET remote control. The components combine functionality, extendibility and ease of installation.

Product features

- › Room based remote control with thermostat function for the WPM
- › Touch wheel operation
- › Room temperature and humidity measurement
- › Easy temperature adjustment for comfort

FET Controller display options

| Type        | FET Controller |     |
|-------------|----------------|-----|
| Article no. | 234723         |     |
| Height      | mm             | 96  |
| Width       | mm             | 145 |
| Depth       | mm             | 31  |
